AMENDMENTS TO THE CLAIMS

This listing of claims replaces all prior versions, and listings, of claims in the application:

1. (Currently Amended) A portable hand-held image capturing appliance,
2 comprising:
 - 3 a photoelement array for acquiring a plurality of image data;
 - 4 a processor configured to receive the image data captured by the photoelement array, and
5 configured to save the image data in an image group;
 - 6 a program code executed by the processor for attaching at least one new image data to the
7 image group such that the image group comprises the plurality of image data and the new image
8 data; [[and]]
 - 9 a display for displaying a page, the page corresponding to one of the image data and the
10 new image data in the image group; and
 - 11 a first button, separate from the display, configured to cause the program code to attach
the new image data to the image group.
 - 1 2. (Original) The appliance of claim 1, further comprising a memory configured to
2 store the image data and the new image data in the image group.
 - 1 3. (Original) The appliance of claim 2, wherein the memory is further configured to
2 store the program code.
 - 1 4. – 5. (Cancelled)
 - 1 6. (Original) The appliance of claim 1, wherein the program code further comprises
2 program code executed by the processor for selecting one of the image data in the image group
3 and for detaching the selected image data such that the image group no longer comprises the
4 selected image data.
 - 1 7. (Original) The appliance of claim 1, wherein the appliance is a scanner.

Appln. Serial No. 10/633,989

1 8. (Currently Amended) A method for displaying image data, the method
2 comprising the steps of:
3 capturing a plurality of image data using a scanner;
4 grouping, by the scanner, the image data into a group;
5 receiving, by the scanner, new image data; [[and]]
6 attaching, by the scanner, the new image data to the group such that the group comprises
7 the plurality of image data and the new image data; and
8 displaying the image data of the group in a display of the scanner.

1 9. (Original) The method of claim 8, wherein receiving further comprises the step of
2 receiving the new image data from a photoelement array.

1 10. – 12. (Cancelled)

1 13. (Original) The method of claim 8, further comprising the steps of:
2 selecting one of the image data in the group; and
3 detaching the selected image data such that the group no longer comprises the selected
4 image data.

1 14. (Currently Amended) A system for A hand-held image capturing appliance,
2 comprising:
3 a display for displaying a plurality of image data, comprising:
4 means for capturing [[a]] the plurality of image data;
5 means for grouping the plurality of image data into a group;
6 means for receiving new image data;
7 means for displaying a flipping animation in response to operating a navigation button
8 separate from the display; and
9 means for attaching the new image data to the group such that the group comprises the
10 plurality of image data and the new image data.

1 15. (Currently Amended) The system appliance of claim 14, further comprising:
2 means for selecting one of the image data in the group; and
3 means for detaching the selected image data such that the group no longer comprises the
4 selected image data.

1 16. (Currently Amended) A computer-readable medium having a program for
2 displaying image data, the program comprising logic configured to cause an appliance to perform
3 the steps of:

4 capturing a plurality of image data;
5 grouping the image data into a first group;
6 receiving new image data;
7 attaching the new image data to the first group such that the first group comprises the
8 plurality of image data and the new image data;
9 selecting one of the image data in the first group; [[and]]
10 detaching the selected image data such that the first group no longer comprises the
11 selected image data; and
12 in response to operation of a navigation button, closing the first group, sliding the first
13 group of image data off a display of the appliance, and presenting a next image data of a second
14 group in the display.

1 17. (Currently Amended) A portable hand-held image capturing appliance,
2 comprising:
3 a photoelement array for acquiring a plurality of image data;
4 a processor configured to receive the image data from the photoelement array, and
5 configured to save the image data in [[an]] a first image group; [[and]]
6 a program code executed by the processor for:
7 selecting one of the image data in the first image group; and
8 detaching the selected image data such that the first image group no longer
9 comprises the selected image data,
10 a display for displaying a page, the page corresponding to one of the image data and the
11 new image data in the first image group; and
12 a navigation button separate from the display and configured to cause the program code
13 to close the first image group and to open a second image group for display.

1 18. (Currently Amended) The appliance of claim 17, further comprising a navigation
2 another button separate from the display and configured to cause the program code to detach the
3 selected image data from the image group.

1 19. (Original) The appliance of claim 17, wherein the program code further
2 comprises program code executed by the processor for attaching at least one new image data to
3 the image group such that the image group comprises the plurality of image data and the new
4 image data.

1 20. – 21. (Cancelled)

1 22. (New) The appliance of claim 1, further comprising navigation buttons separate
2 from the display and configured to cause the program code to flip through the image data of the
3 image group.

1 23. (New) The appliance of claim 22, further comprising another navigation button
2 separate from the display to cause the program code to slide image data of the image group off
3 the display and to display a next image data not in the image group.

1 24. (New) The appliance of claim 23, wherein the image group is a first image group,
2 wherein the next image data is part of a second image group, and wherein the program code
3 changes a displayed image group identifier to identify the second image group instead of the first
4 image group in response to displaying the next image data of the second image group.

1 25. (New) The method of claim 8, further comprising flipping through the plurality
2 of image data and the new image data in response to user operation of navigation buttons of the
3 scanner, wherein the navigation buttons are separate from the display.

1 26. (New) The method of claim 25, further comprising:
2 closing the group of image data in response to operation of another navigation button
3 separate from the display; and
4 displaying a next image data of a second group of image data in response to operation of
5 the another navigation button.
